## In the claims:

Claims 1-3 (Canceled).

- 4. (Previously Amended) A restraints control module (RCM) for a vehicle comprising:
  - a memory device for storing a deployment time of a deployment event;
- a controller electrically coupled to said memory device, said controller determining when to deploy a restraint, storing said deployment time, and storing in said memory device a fault time corresponding to said deployment time; and
- a comparator electrically coupled to said controller, said comparator comparing said deployment time with a fault time and determining whether said fault time corresponds with said deployment time.
- 5. (Original) A module as in claim 4 further comprising an indicator electrically coupled to said controller and indicating when a deployment time corresponds with a fault time.
- 6. (Original) A module as in claim 5 wherein said indicator comprises at least one of: a pulsating indicator, a light bulb, an LED, a fluorescent light, an audible signal, a visual signal, a 7-segment display, an analog gage, a digital meter, a video system, and a hazard light.
- 7. (Previously Amended) A restraints control module (RCM) for a vehicle comprising:
  - a memory device for storing a deployment time of a deployment event;
- a controller electrically coupled to said memory device, said controller determining when to deploy a restraint and storing said deployment time; and

3

201-0378 (FGT 1543 PA)

an indicator electrically coupled to said controller, said indicator continuously indicating that the RCM has been on a vehicle that has been involved in a collision, until such time when the RCM is serviced or replaced.

- 8. (Previously Amended) A restraints control module (RCM) for a vehicle comprising:
  - a memory device for storing a deployment time of a deployment event;
- a controller electrically coupled to said memory device, said controller determining when to deploy a restraint and storing said deployment time; and
- an indicator electrically coupled to said controller, said indicator permanently indicating that the RCM has been on a vehicle that has been involved in a collision.
- 9. (Previously Amended) A restraints control module (RCM) for a vehicle comprising:
- a memory device for storing a deployment time of a deployment event;
- a controller electrically coupled to said memory device, said controller determining when to deploy a restraint and storing said deployment time;

wherein said controller stores in said memory device a restraint power draw value during said deployment event.

## Claims 10-11 (Canceled)

12. (Original) A restraints control module (RCM) for a vehicle comprising:

an indicator;

a memory device for storing a deployment start time of a deployment event; and

4

201-0378 (FGT 1543 PA)

a controller electrically coupled to said indicator and said memory device, said controller determining when to deploy a restraint and storing said deployment start time and duration in said memory device;

said controller storing a fault time in said memory device and signaling said indicator when said fault time corresponds to said deployment start time and duration.

- 13. (Previously Amended) A module as in claim 12 wherein said indicator continuously indicating that the RCM has been on a vehicle that has been involved in a collision.
- 14. (Previously Amended) A module as in claim 12 further comprising a comparator electrically coupled to said controller, said comparator comparing said deployment time with a fault time and determining whether said fault time corresponds with said deployment time.
- 15. (Previously Amended) A module as in claim 12 wherein information stored in said memory device is uneraseable, unresettable, and unoverwritable.

Claim 16-21 (Canceled).

22. (Previously Amended) A method of time stamping and indicating a deployment event within an automotive vehicle having a RCM, said method comprising:

sensing a collision;
generating a collision signal in response to said collision;
deploying a restraint in response to said collision signal;
storing a deployment time; and
storing restraint power draw during the deployment event.

5

201-0378 (FGT 1543 PA)

23. (Currently Amended) A method of time stamping and indicating a deployment event within an automotive vehicle having a RCM, said method comprising:

sensing a collision;

generating a collision signal in response to said collision;

deploying a restraint in response to said collision signal;

storing a deployment time; and

continuously indicating a fault in response to the deployment event utilizing information from an uneraseable, unresettable, and unoverwritable memory.

- 24. (New) A restraints control module for a vehicle comprising:
- a memory device for storing a deployment time of a deployment event; and
- a controller electrically coupled to said memory device, said controller storing a deployment end time of a restraint in said memory device.
  - 25. (New) A restraints control module for a vehicle comprising:
- a memory device for storing a deployment time of a deployment event; and
- a controller electrically coupled to said memory device and determining when to deploy a restraint and storing said deployment time in said memory device, said controller storing operating time of the restraints control module in said memory device.
- 26. (New) A method of time stamping and indicating a deployment event within an automotive vehicle having a RCM, said method comprising:

sensing a collision;

generating a collision signal in response to said collision; deploying a restraint in response to said collision signal; MAR-09-2004 11:10

U.S.S.N. 09/683,605

6

201-0378 (FGT 1543 PA)

storing a deployment time of said restraint; and indicating whether the RCM has been on a vehicle that has been involved in a collision, wherein said indication is uneraseable, unresettable, and unoverwritable.
